

5.3.

5.3. Data Publication

Using EZID, Merritt, and CDL's publishing services UC3 and the CDL Publishing and Access Group will explore developing capacity for "data papers." A data paper is a package that includes data, its metadata, and any processing information (techniques, formulas, software, etc.) that together define the state of a data product that was used and is ready for reuse in traditional journal articles. See CDL white paper for more information: <http://www.cdlib.org/services/uc3/docs/dax.pdf>
