

Anvl

ANVL: A Simple Record Syntax

Name:	ANVL
Version:	0.1 (2005-02-14)
Status:	Beta
Specification:	A Name-Value Language (ANVL)
Download:	CPAN
More information:	Curation home page

ANVL (A Name-Value Language) is a simple record syntax based on email headers. An ANVL record is a sequence of data elements ending in a blank line. An element consists of a label, a colon, and an optional value, and a long value may be folded (continued) onto the next line by inserting a newline and indenting the next line.
