

CAN

CAN: A Simple File System-Based Object Store

A Content Access Node (CAN) is a simple file system convention for storing digital objects. It imposes minimal architectural and policy constraints while reserving a small set of file system names (directories and files) that place certain salient object store features, if available, in well-known locations within a single directory hierarchy that comprises the object store.

Name:	CAN
Version:	0.15 (2012-02-23)
Status:	Alpha
Specification:	CAN: A Simple File System-Based Object Store
Download:	Not Available
